

# Liebherr Power Efficiency

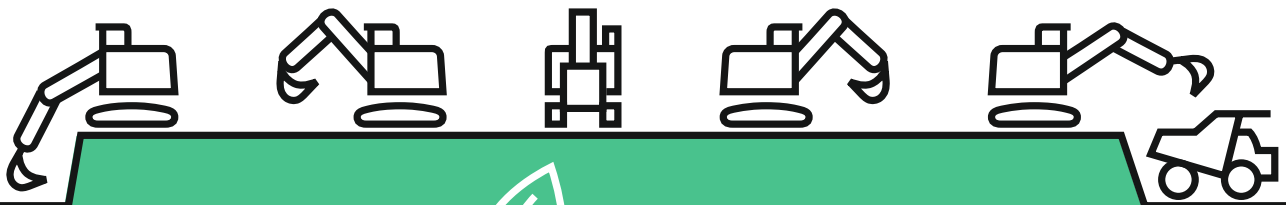

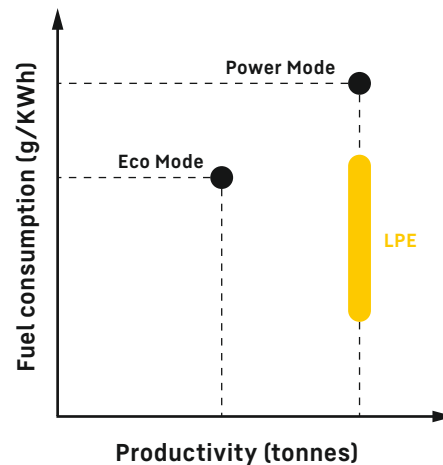

Engine Control

**LIEBHERR**

Mining equipment

Available as retrofit the Liebherr Power Efficiency Engine Control enables fuel consumption reduction without compromising machine performance.

Based on sensors and piloting signals the Liebherr Power Efficiency Engine Control optimize fuel consumption and reduce throttling losses when the machine operates. Engine power is adapted automatically to working phases, which provide high fuel efficiencies.

Up to **10%**  
fuel reduction\*

\* Depending on application and machine model.
