## Remarks

- The load capacities stated are valid for lifting operation only (corresponding with crane classification according to ISO 4301-1, crane group A1).
- Machine is standing on firm, horizontal ground.
- The weight of the lifting device (pulley block, hoist ropes, shackles, etc.) must be deducted from the load capacity.
- Additional equipment on boom (e.g. walkways) must be deducted from the load capacity.
- The max. admissible wind speed can be preselected in the LML software and referred to in the load chart.
- Working radii are measured from centre of swing ring and under load.
- The lifting capacities are valid for 360 degrees of swing.
- Calculation of stability under load is based on ANSI/ASME B 30.5 load ratings as well as ISO 4305 Table 2 and tested according to SAE J765 and SAE J987.
- Weights may vary depending on the delivered configuration of the machine, filling level of the tanks, as well as generally valid tolerances.
- The illustrations in this brochure may include options which are not within the standard scope of supply of the machine.
- Subject to technical change without notice.

# Concept and characteristics

---

#### **High performance**

A powerful, efficient and reliable electro-hydraulic drive system combined with a high-performance lithium-ion battery ensures high productivity and allows for several movements to be carried out simultaneously.

#### **Ground pressure**

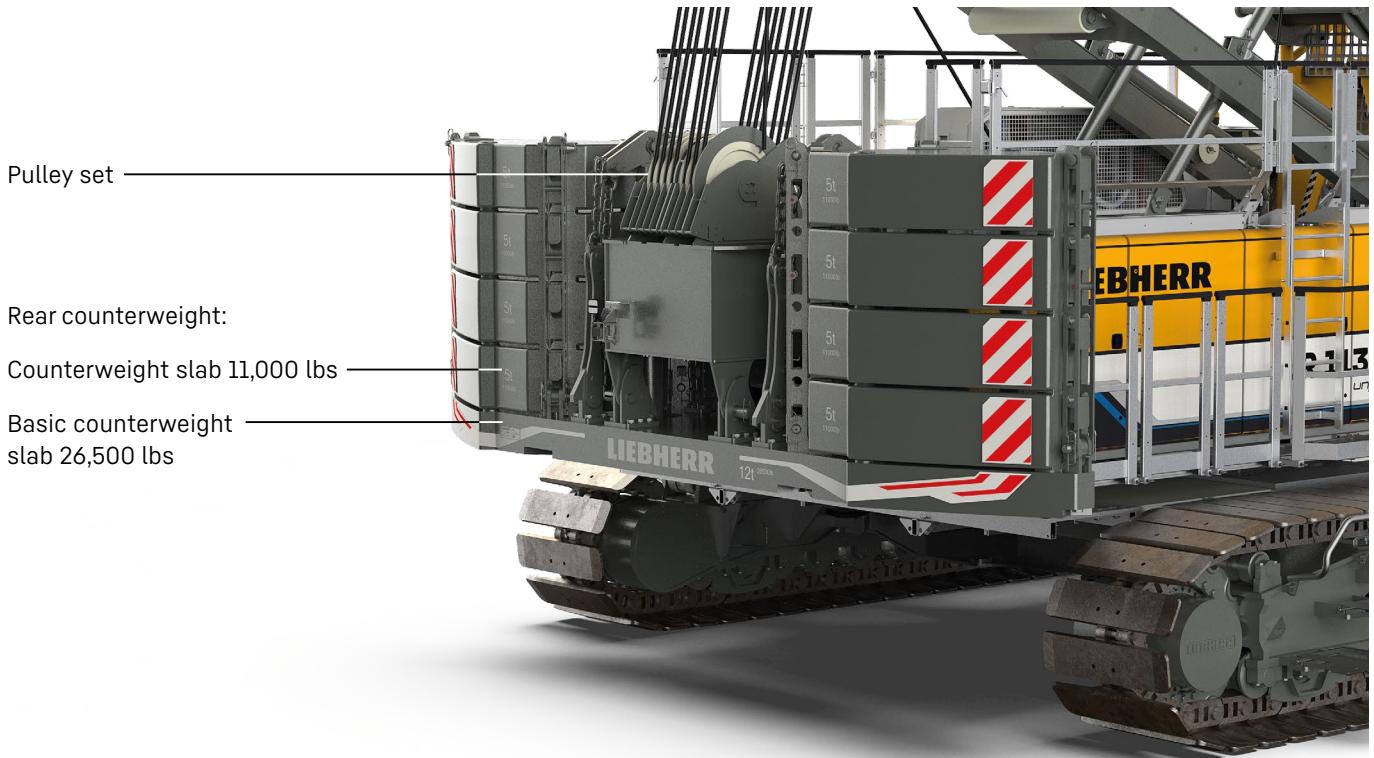

The actual ground pressure is calculated according to the configuration and position of the machine and displayed in the operator's cabin. Using the optional Liebherr Crane-Planner the actual ground pressure can already be calculated and displayed in the planning stage.

#### **Cabin with high comfort**

Optimised field of vision combined with enhanced comfort: an orthopaedic operator's seat with heating and cooling functions, as well as precise and ergonomic controls are included.

#### **Control**

Easy and intuitive handling of control, service and machine functions through a large, clear colour monitor. Built for extreme environmental conditions.

#### **Efficient self-assembly system and short assembly times**

The self-assembly system enables safe, independent and quick assembly/disassembly of the crawler side frames, the carbody and rear counterweights, as well as boom elements.

#### **Mobility**

Crane parts are optimized for transportation. The maximum transport width is 9.84 ft.

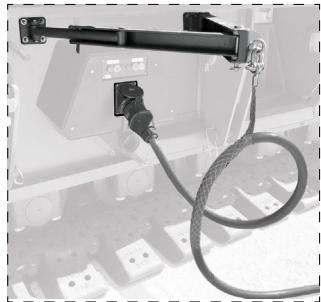

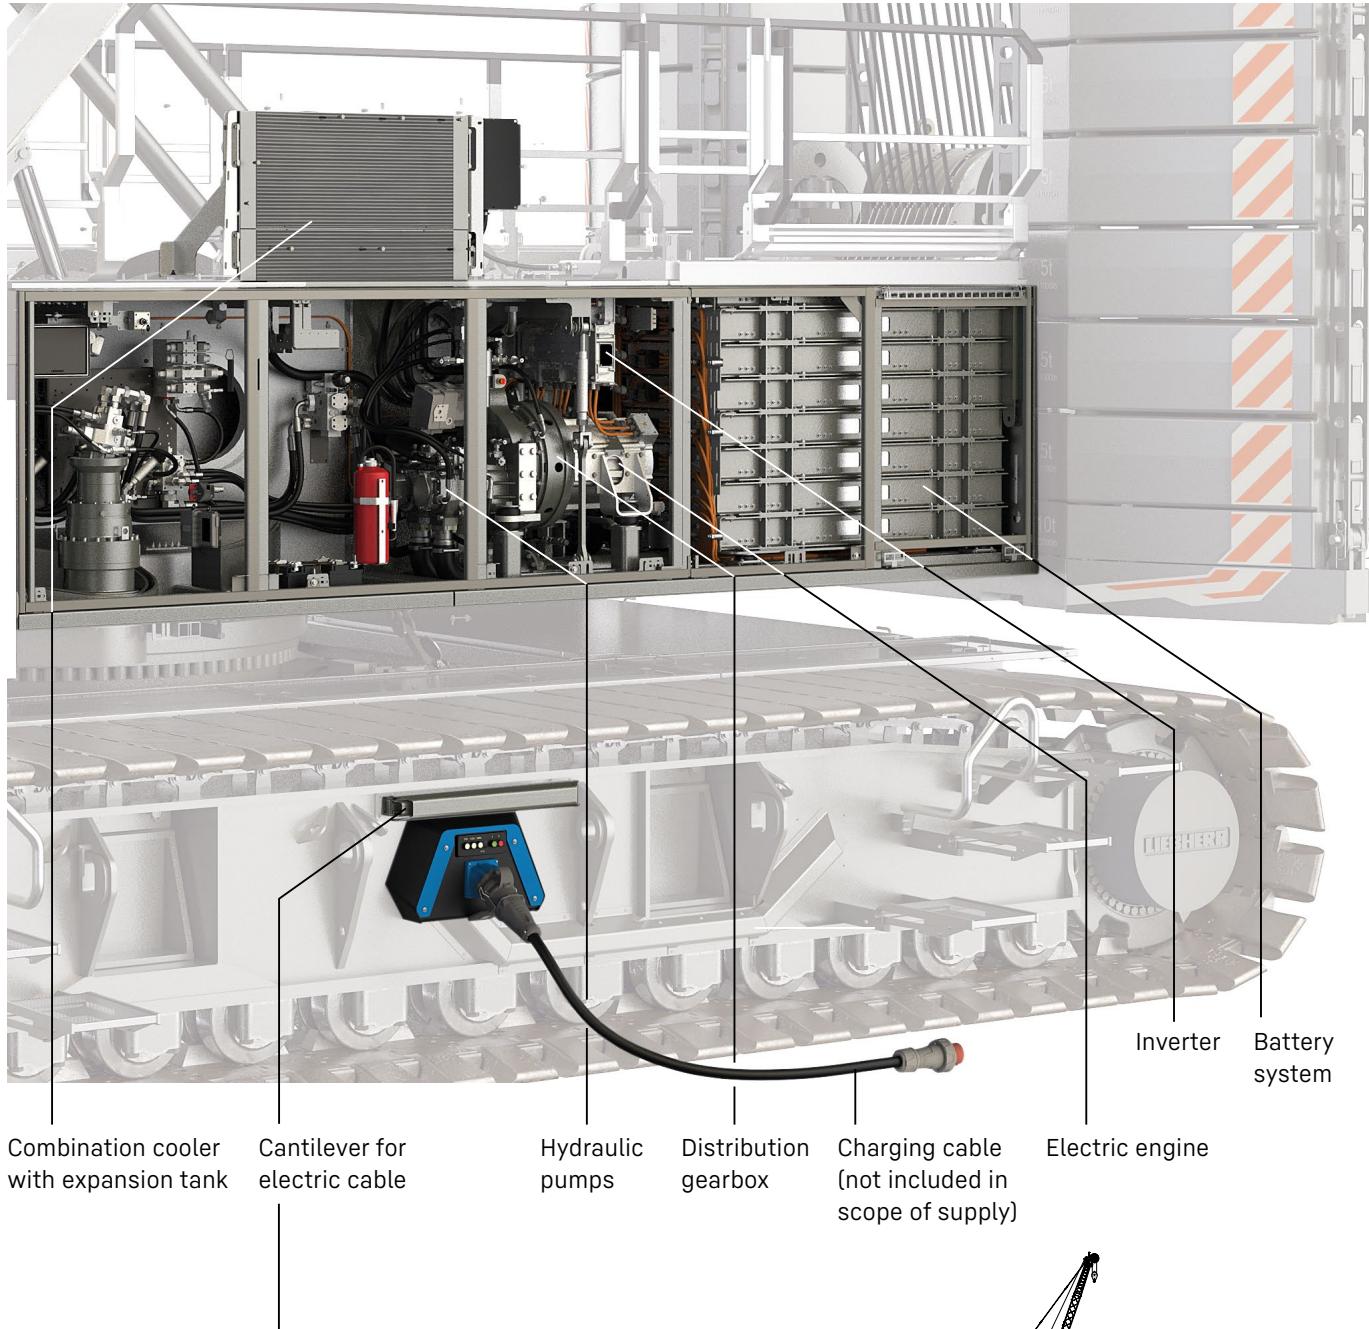

#### **Easy service**

The design ensures easy maintenance and service as well as safe access to the components.

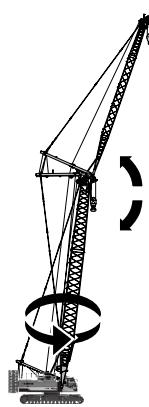

#### **Boom/jib**

A variety of boom systems and configurations allow for optimum operation on the most diverse jobsites.

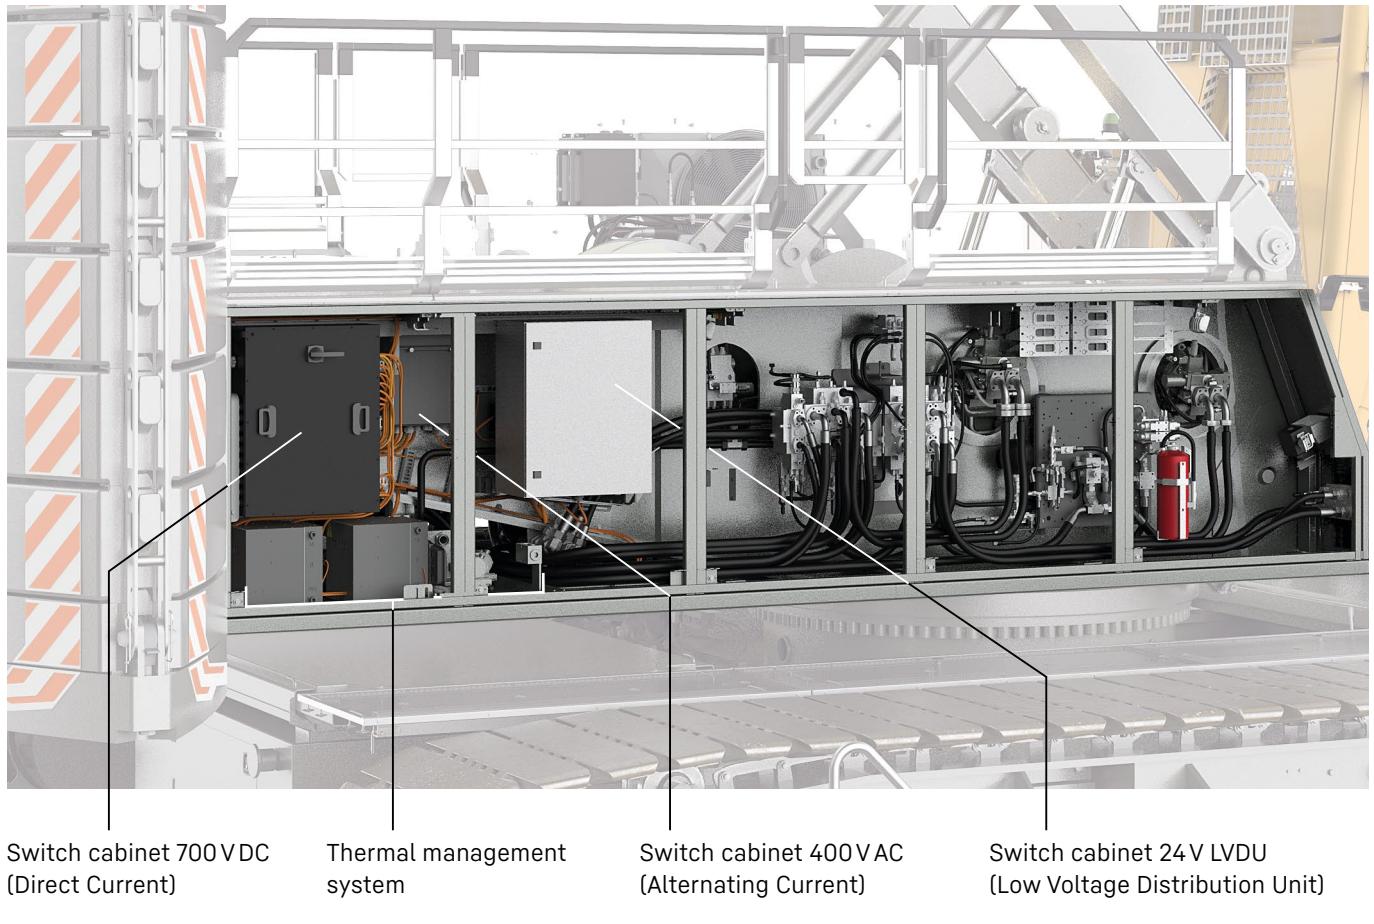

**Exemplifying illustration**

**Performance “plugged in”**  
The crane’s performance in “plugged” operation is in no way inferior to its diesel-driven performance. The machine can be used without limitations as the battery charges continuously when connected and so delivers sufficient energy at all times.

### Exemplifying illustration

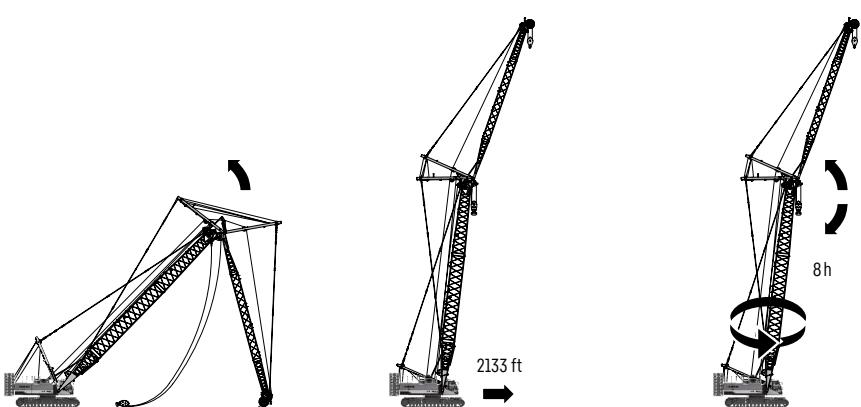

### Performance “unplugged”

The crane's performance<sup>(1)</sup> in “unplugged” operation allows for erecting the boom and jib, for travelling a distance of approx. 2133 ft<sup>(2)</sup> with full counterweight or for approx. 8 hours<sup>(3)</sup> of crane operation.

<sup>1</sup> Battery service life can be optimized by operating the crane in “plugged-in” operation as often as possible.

<sup>2</sup> Fully ballasted on even terrain at 10-25 °C ambient temperature

<sup>3</sup> With an observation period of 10,000 shifts, in 50 % of all shifts the crane can operate in “unplugged” mode for approx. 8 hours at an ambient temperature of 10-25 °C.
