Liebherr Transform

Unleash the full potential

Liebherr Transform does just what the name suggests. For various reasons, machines can become outdated due to ever-changing environment or safety regulations, or new applications and technologies are introduced and have to be pieced together to form a whole new approach to daily procedures. Liebherr Transform provides not only the technologies but also the coordination and best solution to find the most suitable and economic answer for your requirements, and makes your machine stronger, faster, smarter greener, and ultimately... better.

stronger

faster

greener

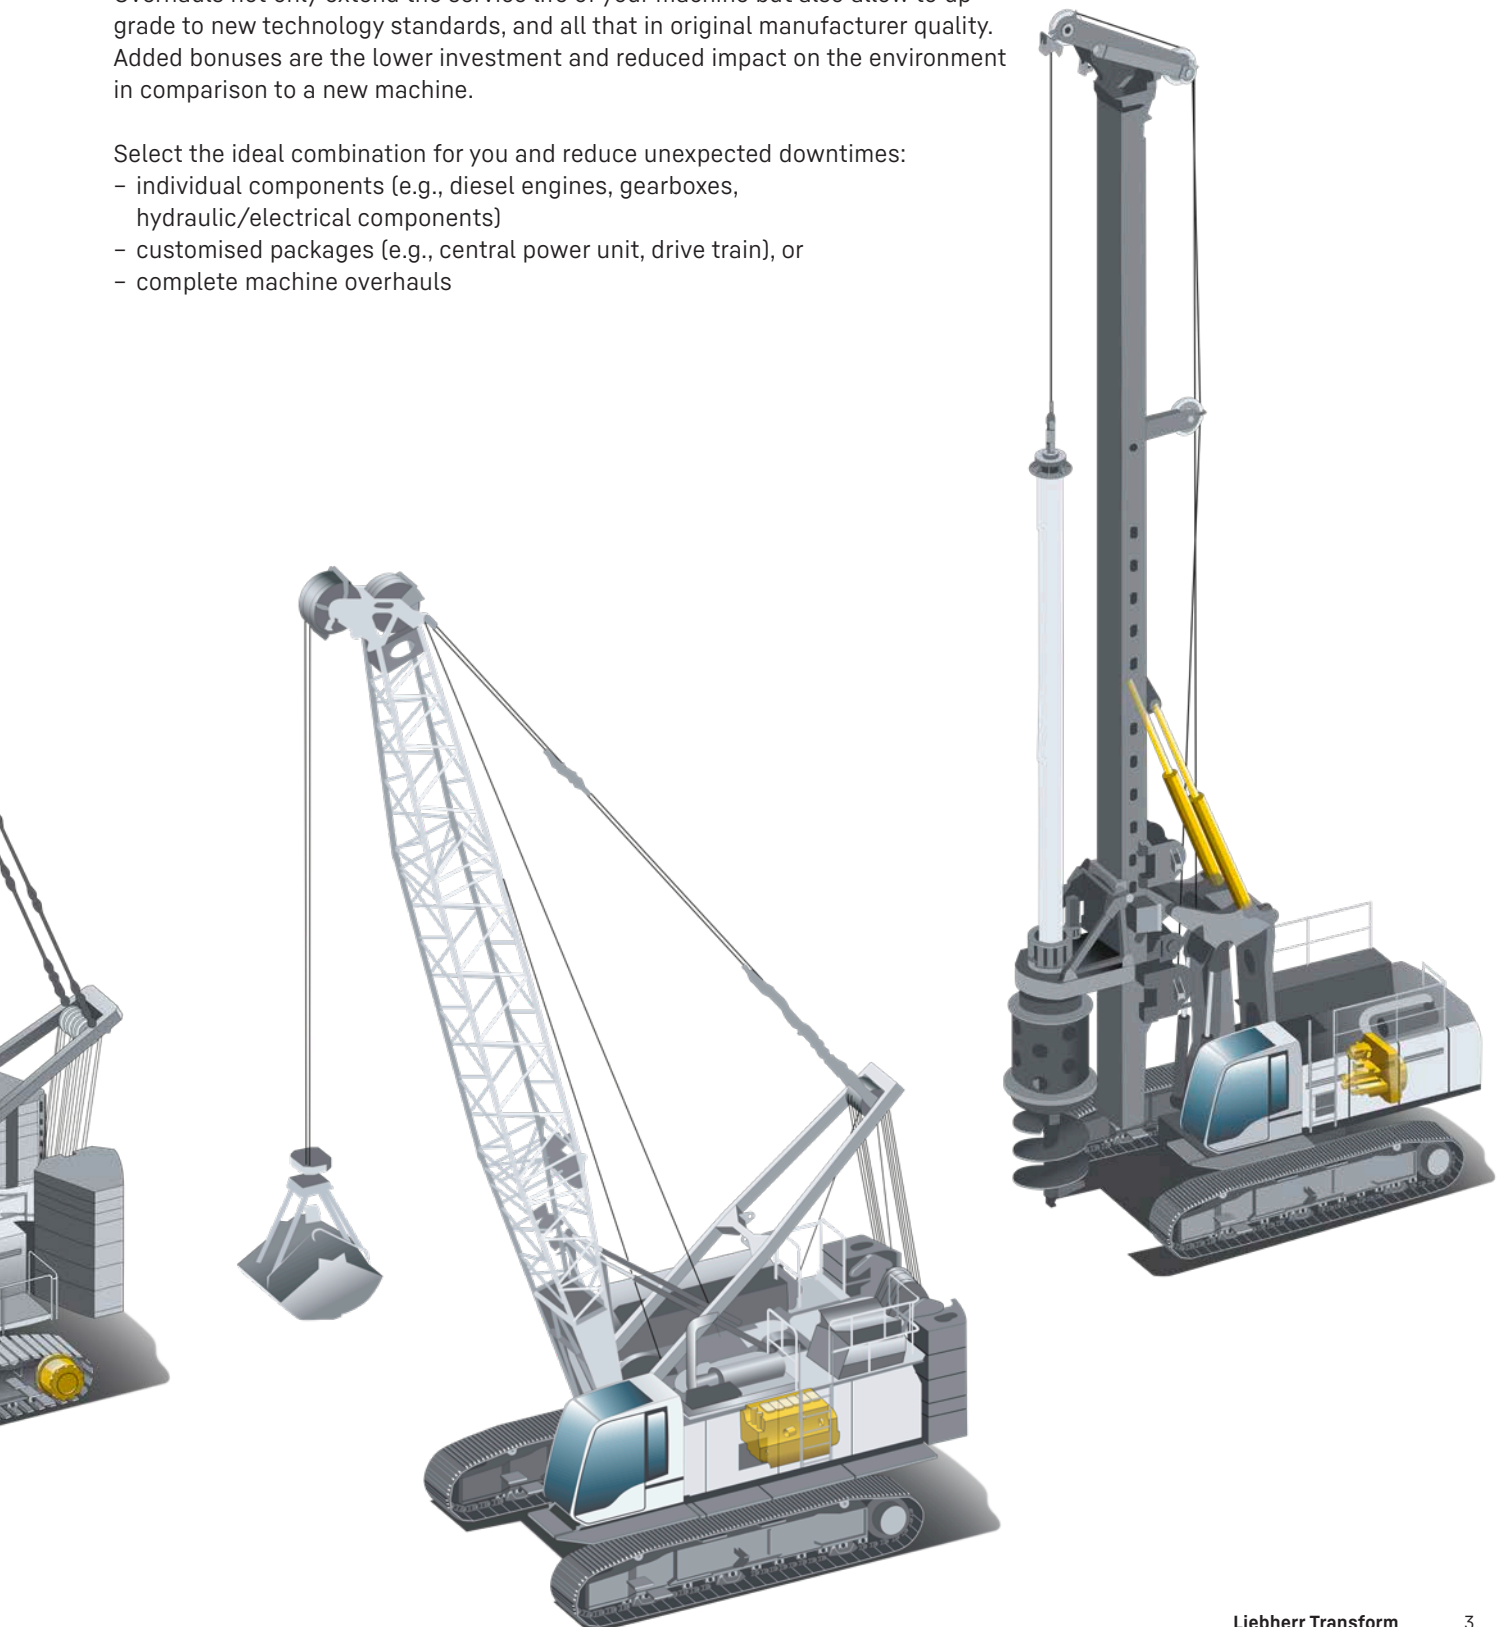

Liebherr can help you to find the optimum level of overhauling, ranging from individual components up to complete machine. Each package can be selected to provide the most suitable and economic solution for your requirements. Experienced Liebherr engineers carry out the work at one of our well-equipped workshops or on your site. Downtime can be planned to fit your schedules.

Overhauls not only extend the service life of your machine but also allow to upgrade to new technology standards, and all that in original manufacturer quality. Added bonuses are the lower investment and reduced impact on the environment in comparison to a new machine.

Select the ideal combination for you and reduce unexpected downtimes:

- individual components (e.g., diesel engines, gearboxes, hydraulic/electrical components)
- customised packages (e.g., central power unit, drive train), or
- complete machine overhauls

Liebherr Transform

Overhauls

Depending on your needs we offer overhauls of individual components, customized packages, or complete machine overhauls. These can be carried out as an all-round carefree package at one of our many service centres located all over the world, or if desired, at your site.

Upgrades

Starting with on-site consulting and demand planning through to actual installations, we are at your side as a strong solution partner. We offer a wide range of upgrades to ensure your machine continues to meet all the requirements of new legislation and standards, and also to maintain high versatility to compete on the jobsite of the future.

Retrofits

We provide many retrofits designed to make your machine more economical, to significantly improve performance, and to make life easier for you and your employees. These systems have been developed by Liebherr following decades of technological experience and in response to your requirements.
