LIEBHERR

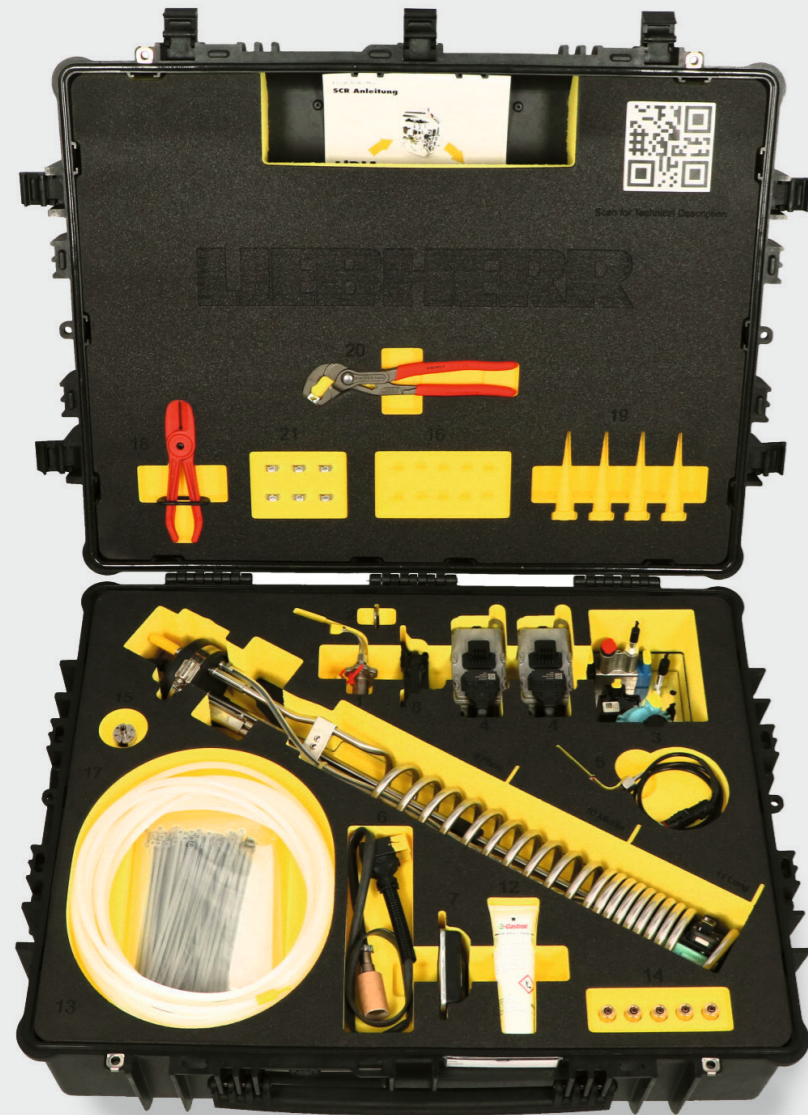

Customer service

 **LiDIA**

Service made simple

Self-service in focus

This robust and specially adapted case provides ideal storage for sensitive SCR components. In combination with a LiDIA customer licence all arising problems can be quickly identified and rectified by site personal, thus increasing the machine availability. Any additional support that may be required can be quickly and easily provided by us through our remote service, XpertAssist.

Single source

All the necessary parts for repairing the SCR system of your Stage IV/Tier 4F and Stage V machines are optimally incorporated in one case.

Original quality

Liebherr original parts are perfectly tailored to Liebherr diesel engines. This is of vital importance as the performance of the whole machine relies on the quality and compatibility of the individual parts.

Straightforward

All components and usual working processes are clearly described in the accompanying documentation. The comprehensive manual combines working steps with corresponding tools and components.

Your benefits

Cost-effectiveness:

- site personnel can carry out repairs themselves - no external personnel required
- the SCR kit is more economical as opposed to purchasing individual parts

Higher machine availability:

- site personnel can carry out repairs immediately

Convenience:

- all parts are available on site
- replacement parts are listed in the manual and can be easily ordered online in the MyLiebherr customer portal or from your local service partner.

Worldwide at your service
