Below zero, zero problem.
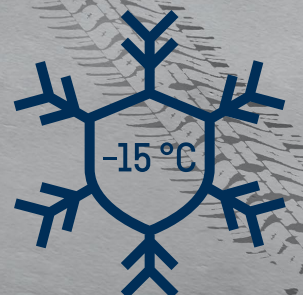

FrostProtect guarantees flawless operation, even in ambient temperatures as low as –15 °C.

GP 1486

When below zero is a big plus: FrostProtect.

No room for a freezer in the kitchen or other heated areas in your home?

We have some great news: With FrostProtect, all components are designed for temperatures as low as −15 °C. If the ambient temperature falls below 0 °C, our freezers continue working just as efficiently, saving just as much energy and your frozen food is just as well protected.

So you can put them in unheated rooms like a garden shed or garage and have more room for more important things.

G German Engineering

BLU Performance

New: FrostProtect now in NoFrost models with BluPerformance technology

All of the refrigeration technology is in the appliance base. So appliances with BluPerformance with the same outer dimensions have a much greater usable volume. Meaning you have noticeably more space for your food. And we were able to further improve energy efficiency thanks to improved ventilation and extraction in the base.

**No Frost** — Convenience of never having to defrost.

Smart Frost — Much less frequent defrosting.

Stop Frost — Less frequent defrosting and easier opening of the chest lid thanks to no vacuum.

[1] In accordance with regulation EU 2019/2016, we indicate the total volume to the nearest integer (rounded off).

The term "volume" refers to the term "capacity", which is used in the current Regulation.

You can find the entire range of efficiency ratings on the reverse side. According to (EU) 2017/1369 6a.

For complete model descriptions, visit home.liebherr.com

The future is circular.

The newly developed BluRoX technology from Liebherr is going to change the market for refrigerators and freezers sustainably. Instead of polyurethane foam, we use a much more effective form of cold insulation: a vacuum. Finely ground lava stone, known as perlite, stabilises the vacuumed components.

The first freezer using vacuum perlite technology in the door and built for the circular economy of re-use has already been certified with the "B" efficiency rating. And with every new BluRoX appliance we design, we will set new standards in terms of energy efficiency and capacity – and humanity and the environment will be the winners.
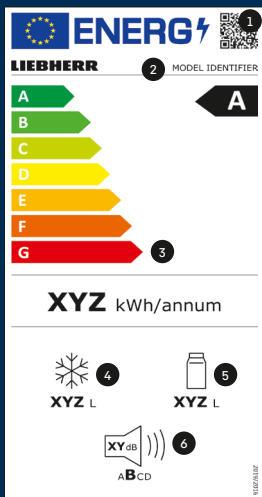

To learn more about this exciting technology and the many advantages of BluRoX, visit:

FNb 5056
Available from the
2nd quarter of 2023

B | A to G

The current EU energy label for electrical appliances

1. QR code to identify the product in the EU database EPREL (European Product Registry for Energy Labelling).

2. The model identifier for manual identification of the product in the EU database EPREL, using the article number for example.

3. The new efficiency scale from "A" to "G". However, "G" is only intended for wine cabinets.

4. The total volume* of all freezer compartments.

5. The sum of the volume* of all cold-storage and refrigerator compartments.

6. The noise level is now classified into classes "A" to "D".

* The term "volume" is defined in current regulation EU 2019/2016.
